### How to Grow Peace Lilies

The Peace Lily is related to other aroids, including anthurium and alocasia. The plant has glossy, pointed and oval leaves that emerge from the soil. Typical of the aroids, the white flowers emerge from the leaf stalk surrounded by a cupped white spathe that gradually...

"This is my plant it's a peace lily. I've named it Smol Steven."

Post a service request  
Who can help me to repot the lily?

BOTANICAL NAME: Spathiphyllum

PLANT TYPE: Houseplant

SUN EXPOSURE: Shade

FLOWER COLOR: White

#### LIGHT

Areca Palms require bright indirect light. Too much light or direct sun burns the fronds and causes them to turn yellow.

#### TEMPERATURE

Areca Palms prefer temperatures between 65-75 degrees during the day and around 55 degrees at night. This plant is very sensitive to low temperatures so if you place it outside during the summer be sure to bring it in before temperatures dip below 50 degrees.

#### HUMIDITY

High humidity is essential in keeping an Areca Palm looking good.
